Art Unit: 2632
Applicant: Jay Warren Gardner

52. An electric power monitoring method of claim 30 where in an initial time interval is added to the method, where in this initial time interval begins at the time a reported load capability increases, and is used by the interrupt switches to allow predominantly low priority loads that have interrupted power to their loads for a time greater than or equal to a predetermined time, to return power to their loads ahead of higher priority loads.
